

NEWSLETTER 4: 17 SEPTEMBER 2021

Workshops are well underway!

The ILESE Regional Teams are making great progress, the South African Alliance and Brazilian Alliance have now completed their first workshops and many more teams have made plans to host theirs over the coming weeks, we are very happy with all the great ideas you are contributing to the scoping study and cannot wait to share the results with you all!

Delphi Nominations

It's very important that we gather your views about who you'd like to nominate as a Delphi Expert so this is just a gentle reminder to get your Delphi nominations in to your Team Leaders in the timeframes specified along with completed consent forms. In addition to hearing your views as experts on Innovative Learning Environments this is a very important piece of the research puzzle and we want to ensure we are representing your perspectives as comprehensively as possible.

Post-workshop activities

Now that our first Workshop is organised and running, it's time to think through how we will build inter-Team communication between events. Part of our planning has included:

- A set of informal Regional (time-zone) Zooms to simply talk over what we found, discussed, and any unfinished ideas.
- Passing around the data sets generated through the Workshops.
- Encouraging between-Teams conversations by making each other's contact details available.
- Using the Newsletter to slowly build awareness of each other's Teams.
- Getting some Blogs happening so we can hear each other's ideas.

Your buddies will encourage you to make contact with others (from anywhere within our global ILE+SE community) where they see useful links and potential discussions.

Building awareness and sharing ideas

Don't forget to send us photos of the great work you are doing on learning environments, and we welcome your guest blog contributions! As a guide we ask your blog to be between 250-500 words, to provide an overview of a particular piece of work you would like to highlight, interspersed with eye catching photos, and concluding with 3-5 take away messages. Please send these to info@ilesescopingstudy.com.au to be added to the website.

Team Canada/New Brunswick

Since 2019, Team Canada have been crafting a longitudinal project with many research partners across the world called Intr'Appreneur.

1. Photos courtesy of Mario Chiasson, Intr'appreneur

The team are in the process of transforming a school into an Innovative Learning Centre. They are merging grades, subjects, and teaching staff in one learning space (per grade) and capturing the teachers' and students' experiences.
